Bridging the Gap:

Uniting 2c8 Process Visualization with M-Files Centralized Information Management

In the modern business world, the 2c8 Apps is key for process visualization, while M-Files excels in centralized information oversight. Yet, there's a challenge in cohesively merging these platforms. This shortfall could prevent companies from tapping into the full advantages of each tool.

Resolving this integration issue is vital for enterprises striving to optimize both systems' capabilities and the good news is that we have a solution for you.
HIGHLIGHTS

Efficient Process Management

Compliant Document Management

Centralized Information

PROBLEM

In today's fast-paced business landscape, efficient operation hinges on streamlined process-orientation. As companies evolve, tools like the 2c8 Apps have emerged as vital assets, enabling organizations to visualize, draw, and interlink processes, subsequently tying these processes to specific documents and instructions.

Concurrently, the growing need for a unified system of information management is undeniable. Centralized information management systems like M-Files stand out, offering unparalleled oversight over organizational information flow through the use of metadata.

But a gap persists: there's no seamless way to integrate the dynamic capabilities of 2c8 with the comprehensive data management of M-Files. This disconnect potentially hampers organizations from fully leveraging the synergies of both tools, potentially affecting their competitive edge.

What if there was a way to bridge this gap and merge the strengths of 2c8 Apps with M-Files?

Addressing this integration challenge is paramount for businesses seeking to harness the full potential of both platforms.

SOLUTION

By presenting/visualizing M-Files documents in the 2c8 Apps you as the user will gain the benefits from both applications. This will of course lead to increased efficiency, compliant document management and centralized information management in your organization.

The '2c8 Modelling Tool Plugin' for M-Files is developed by Columbus and will provide:

- Search capabilities empowered by M-Files metadata
- Visibility and ease of use
- Increased employee engagement

The solution for a seamless integration is straight-forward and is thoroughly developed by an experienced team of developers.

After purchase, you will receive an application file to install on the 2c8 Client Machine. When the installation is complete, you will then need to configure the 2c8 plugin using Modeling Tool, to establish connection with M-Files. That´s it, simple as that!
